

Champion Software: *Intelligence is everything.*

Revolution, not just evolution.

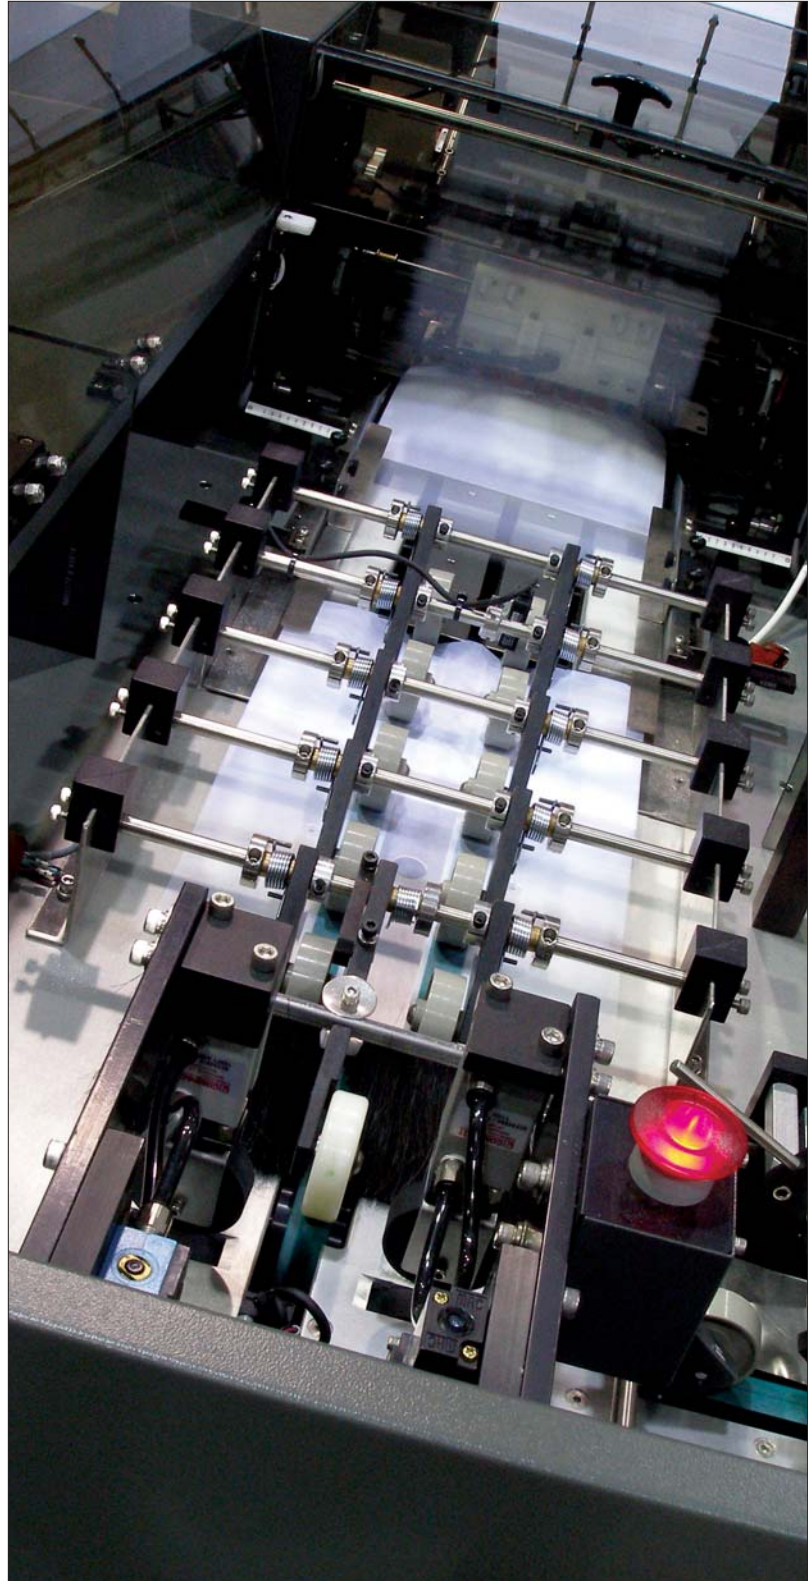

Gunther's revolutionary Champion™ is the first software in the paper handling industry completely based on the Windows operating system. From the SQL database to the XP OS, and then on to the Windows CE nodes that operate the individual devices, the .NET framework written in C# and C++, provides an open architecture means of handling all operating and communication tasks.

Champion's sophisticated design allows all communication to, from and within the inserting system to be conducted in TCP/IP, allowing it to be entirely LAN and Internet accessible. Having the same framework throughout the system allows for easy collection and transmission of sheet level amounts, as well as package level data, without forcing the user to acquire complex and expensive external software.

Building on Gunther's proven experience and technology that have produced Guaranteed 100% mail integrity and high throughput inserters, Champion takes the next step in providing companies with a supremely versatile, efficient and highly intelligent solution with a focus on effective business operation and management.

"Before seeing Champion in action, I thought that half of what they told me about it was exaggeration. Now I realize that they didn't tell me half of what this machine can really do."

"The types and numbers of reports available with Champion have increased dramatically. Newer reports can be easily created for use at all levels of the organization."

Business Data: Measure, Manage, Maximize

The underlying basis for all processes and business decisions is the ability to measure—quickly, simply and accurately. Champion utilizes SQL as the foundation of its data management, providing a wealth of information that can be monitored and utilized internally by Champion’s User Interface and also by external programs—delivering information tracking and detailed database storage that is unparalleled.

- Simple acquisition of system and operating metrics.
- Standard reports available; custom reports quickly generated.
- Rapid integration of data into other applications and software.

From measurement to management, Champion is a powerful enabler for decision making, not just for the user, but also at the business level. For any organization this breadth of data management brings a wealth of benefits.

- Greater control of operations for increased efficiencies.
- Continuous evaluation and improvement via readily accessible data.
- The ability to quantify and qualify processes in real time.

Champion Interface: Simple, Elegant, Powerful

Champion is designed to be easy to implement and simple to use. Its Windows based architecture creates a familiar environment for users, with straightforward navigation. The correct actionable information is always displayed, and a touch screen interface is provided. Operating and managing an inserter has never been so effortless.

- Fast user training and orientation for maximum efficiency.
- Clean and obvious navigation.
- Performs complex jobs with ease for maximum flexibility.

Production			
Current Statistics	Total	Rate	Production Cycle
Total Sheets Fed	1485	37414	36038 37254

Productivity and Flexibility Equals Profitability

Champion’s clean and sophisticated design has created an environment in which the maximum speed of system devices is now obtainable. Increases of two to three times over previous limits are now possible, providing a dramatic improvement in throughput—and one where measurable returns can be realized quickly.

Champion builds on Gunther’s traditional versatility by supporting the convertible capabilities of the machines, changing from flat to folded rapidly. Since the infrastructure is built on modules, the future addition and upgrade of new hardware or software components can be accomplished with ease.

- Faster throughput, lower ownership costs.
- Supports rapid change out of flexible systems.
- Enterprise wide support, simple to add new machine into larger system.

“We have had a significant throughput improvement with Champion, especially in processing multiple page applications.”

“The Champion database is simple to use and effortless to integrate.”
